How to add Locations/Networks

Environment : Xcitium Dome Secure Web Gateway

Summary : In order to enforce web protection policies , your endpoint and network traffic has to be routed through Xcitium Dome. After connecting your network(s), make sure to add them as a 'Trusted Network ' in the location interface so that your traffic will be allowed and inspected by Dome SWG.

This video explains how to add your location to Dome Secure Web Gateway.

Video Tutorial: Click to open the Video Tutorial

Prerequisites

- It is assumed that you have already C1 account

- It is assumed that you have already Dome SWG instance in your C1 portal

Configuration Steps

Step 1 : *Connecting Dome SWG Portal*

i. Login to C1 portal from https://one.Xcitium.com

ii. Go to Application --> cDome Standard

iii. Cdome Standard (SWG) portal will be opened on another tab

Step 2 : *Adding Trusted Network*

i. Go to Configuration --> Locations

ii. Click on "Add Location "

iii. Fill required fields

Name : Enter an appropriate name for the location.

Remark :Enter comments, if any, about the location.

Addressing:Enter the public IP address of the network or fully qualified domain name (FQDN) of network

End user authentication method – The method used for authenticating end users. The options available are Dome Authentication, Local Authentication Proxy Chain and Local Authentication ICAP. Select the method appropriate to your network. Please note that if you enable user authentication, it is mandatory that you add end users in the User Management interface and configure authentication settings. If you do not opt for user authentication, then you cannot deploy user based policies and all users in the network will be applied network based rules or default rules

iv. Click on 'Save' to apply your changes
