How to create virtual desktop in CCS

The virtual desktop is a simulated operating environment of the desktop, which is useful for testing any risky application and websites.

To create a virtual desktop open the endpoint in which CCS is installed.

STEP[1]:Go to the path where CCS is installed and executables are available.

For Example:

In this endpoint the installed location is "C:\Program Files\COMODO\COMODO Internet Security"

STEP[3]:Created virtual desktop will look like as shown below

STEP[4]: Virtual desktop has "Comodo virtual desktop pane" on the right side.

It consists of two options

(i)X option-Close virtual desktop

(ii)[\rightarrow] option-Helps to switch between "Normal windows" and "Virtual desktop"
