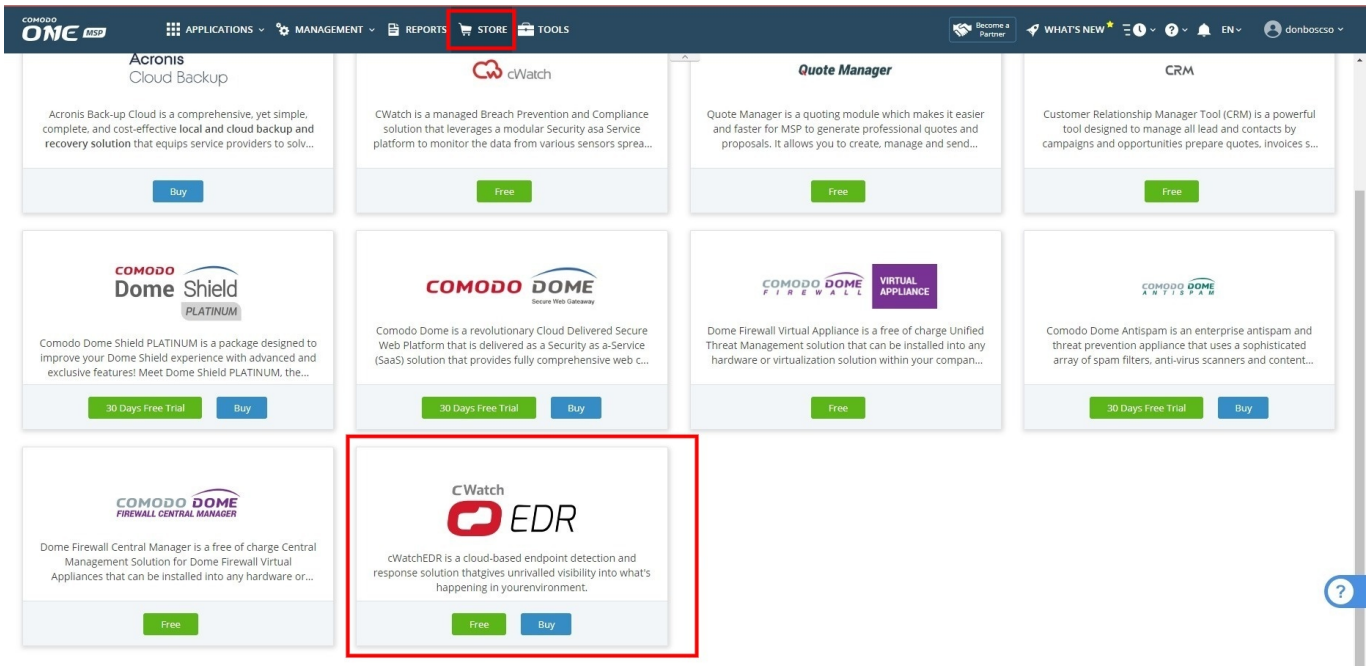
How to deploy a Comodo EDR agent from the Endpoint Manager

- Comodo Endpoint Detection and Response (EDR) is a powerful event analysis tool that provides real-time monitoring and detection of malicious events on Windows endpoints.
- EDR lets you visualize threats in a detailed timeline, while instant alerts inform you if an attack occurs.
- You must install the EDR agent on all endpoints you want to monitor. This tutorial explains how to use Endpoint Manager to deploy the agent to your network.
- After installing the agents, you can manage the data-feed in the EDR management console at https://edr.cwatch.comodo.com/login

Step 1 - Get Comodo EDR

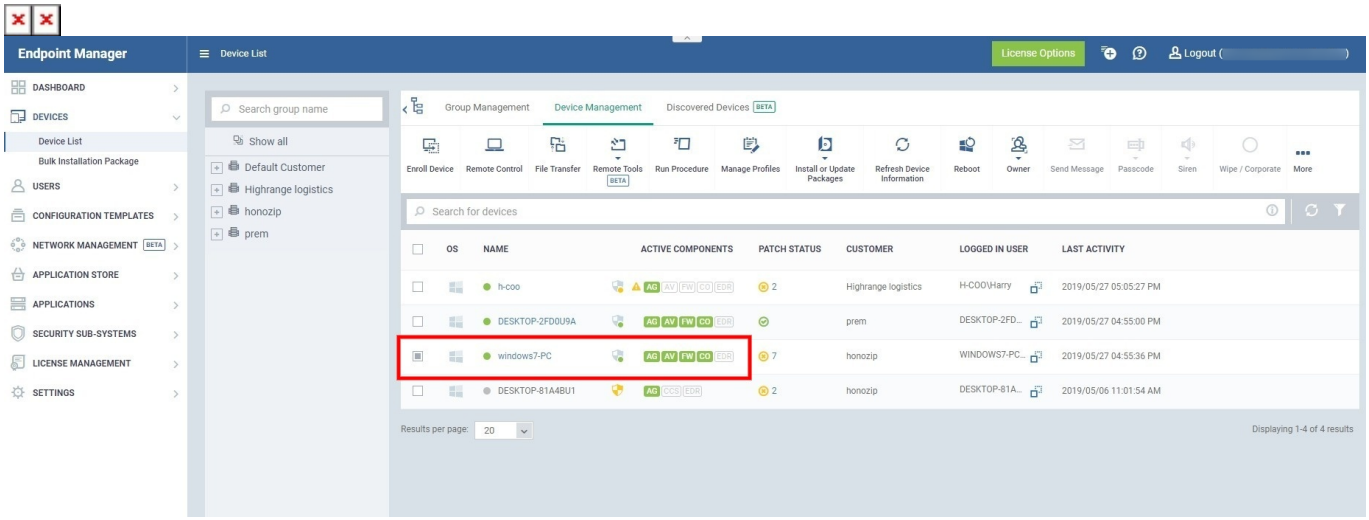
- Comodo EDR must be active on your account before you can deploy the agent.
- If you have not yet enrolled for an EDR account, you can do so through the Comodo One / Dragon interface:
    - Login to Comodo One / Dragon
    - Click '**Store**' then locate the '**Comodo EDR**' tile
    - Click '**Buy**' then complete the enrollment process:



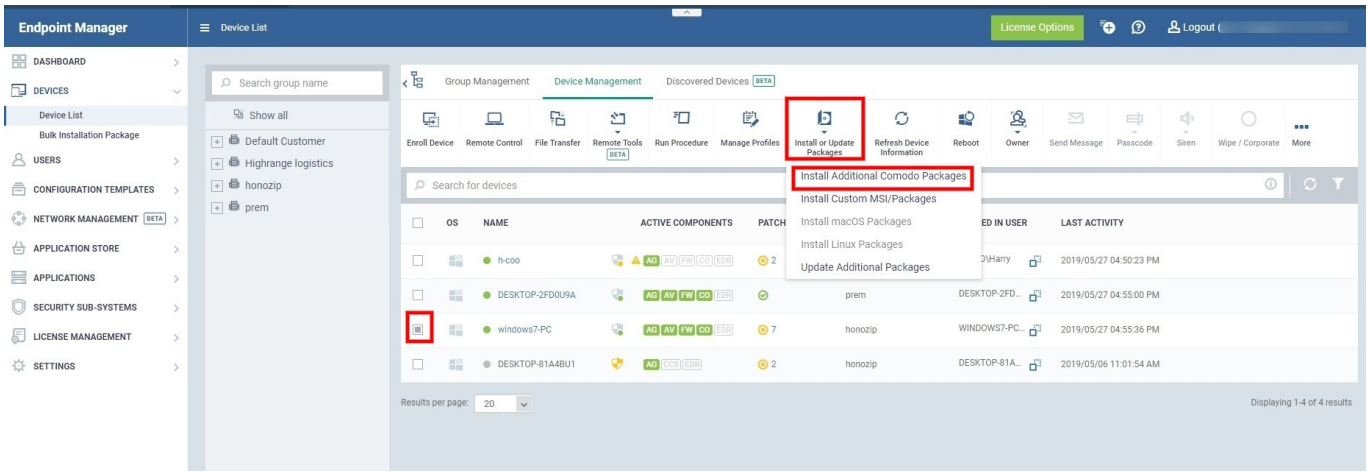
Step 2 – Deploy the EDR agent

- Login to Comodo One / Dragon

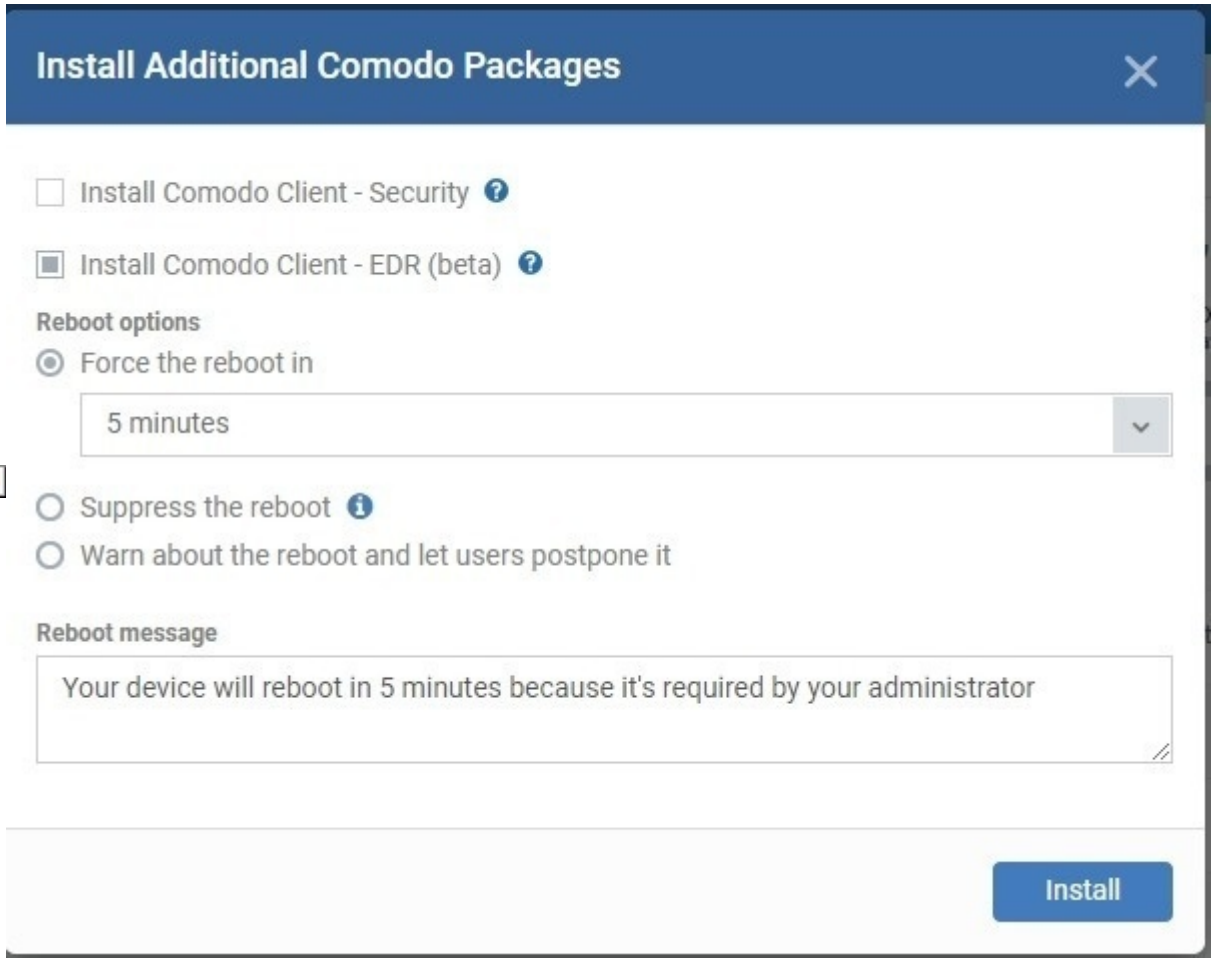
- Click '**Applications**' > '**Endpoint Manager**'
- Click '**Devices**' > '**Device List**' > '**Device Management**'
- Select the Windows devices on which you want to install the agent
    - Tip. The 'Active Components' column shows whether or not EDR is not installed on a target device:



- After selecting target devices, click '**Install or update packages**'
- Select '**Install Additional Comodo packages**':



- Select '**Install Comodo Client – EDR**':



- Reboot options - You need to restart the endpoint to complete the installation. You have the following options:

Force reboot in - Restart the device a certain length of time after installation. Choice of 5, 10, 15 or 30 minutes.

The device will restart automatically when the time elapses.

Suppress the reboot - Do not restart the device after installation. The EDR agent will only become functional after the device is restarted

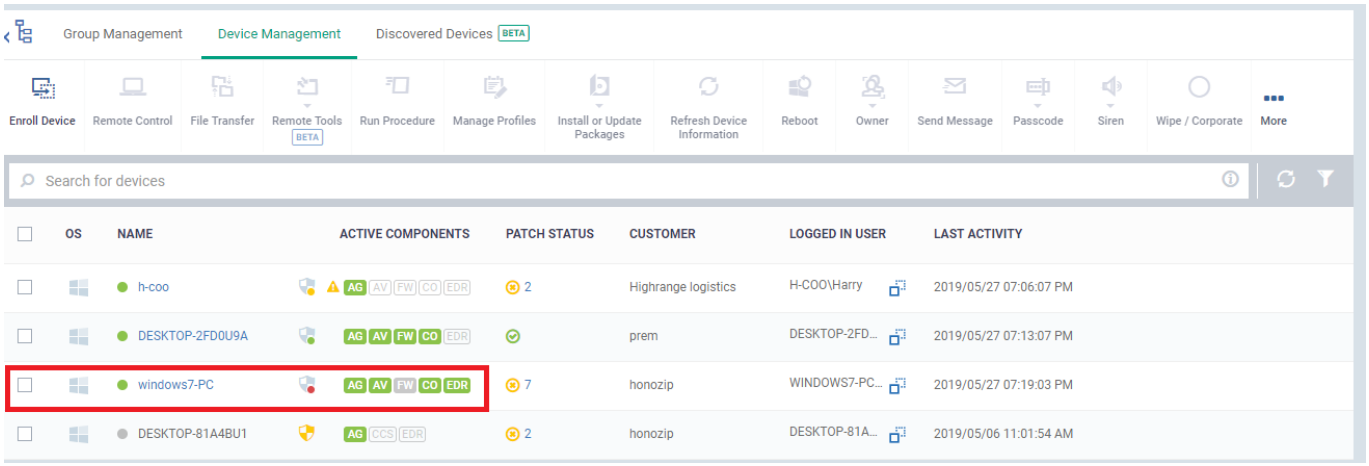
Warn about the reboot and let users postpone it - Show a message to the end-user which advises them their computer needs to restart.

You can type a custom message for the user

Reboot message - Enter a custom message which is shown to the user.

- Click **'Install'** to start the deployment.

- The EDR icon will turn green on endpoints on which the agent is active:



- You can view and manage the EDR data by logging in at https://edr.cwatch.comodo.com/login
