

How to forward Endpoint Manager audit logs to external server e.g. SIEM tool

Click 'Settings' > 'Portal Set-Up' > 'Logging Settings'

- The logs forwarding feature is available only to customers on request. Please contact your account manager if you want this feature enabled for your account.
- The 'Logging Settings' tab lets you specify a syslog server to which EM should forward its audit logs
- For example, you can use this setting to integrate your logs with a security intelligence and event management (SIEM) tool.
- Note - This setting forwards the portal logs, not the endpoint logs.
- You can also view and generate EM audit log reports at 'Dashboard' > 'Audit Logs' interface. See [this wiki](#) if you need help to do this.

Configure logging settings

- Login to Comodo One / Dragon
- Click 'Applications' > 'Endpoint Manager'
- Click 'Settings' on the left then 'Portal Set-Up'
- Click the 'Logging Settings' tab

- Click the 'Edit' on the right:

Active Directory Client Settings Extensions Management Reports User Settings Device Removal Settings **Logging Settings**

Write to syslog server

Host

Port

- **Write to syslog server** – Select to enable log forwarding
 - **Host** – Enter IP or hostname of the syslog server
 - **Port** – The port through which the server listens to EM logs
- Click 'Save' to apply your settings
