

# How to use windows - security level profiles in Endpoint Manager

Endpoint Manager new profiles are optimized for security and usability. The profiles are based on three levels of security as follows:

- 'Windows - Security Level 1 Profile' (replaces 'Optimum Windows Profile')
- 'Windows - Security Level 1 Profile [Former Standard Profile]' (replaces 'Standard Windows' profile)
- 'Windows - Security Level 2 Profile' (replaces 'Hardened Windows Profile')
- 'Windows - Security Level 3 Profile' (new profile - max. security)

Step [1] : To view the profiles go to "Endpoint Manager"→ "CONFIGURATION TEMPLATES"→ "Profiles".

- More details on each profile are under the next screenshot.

## Windows - Security Level 1

- Replaces 'Optimum Windows Profile' with the following addition:
  - HIPS is enabled with 'Safe Mode' + 'Allow Request active'
- This is now the default profile unless you designate a new default

## Windows – Security Level 2

- Replaces 'Hardened Windows Profile' with the following additions:
  - HIPS is enabled with 'Safe Mode' + 'Block Request active'
  - Auto-containment is active with logging enabled

## Windows – Security Level 3

- New profile featuring highest security settings
- Same as 'Windows – Security Level 2' with the following additions:
  - Antivirus settings - 'Use Cloud While Scanning' is enabled by default in 'Full Scan'. The cloud database is the most up-to-date version of the virus database, so [antivirus scans](#) are more accurate. It also means CCS is capable of detecting zero-day malware even if the local database is out-of-date.

- HIPS settings – all interpreters are enabled under ‘Heuristic Command Line Analysis’ and ‘Embedded code detection:

The screenshot shows the Endpoint Manager interface for configuring HIPS settings. The main window displays the 'HIPS Settings' for a 'Windows - Security Level 3 Profile for ITSM 6.20'. The 'Enable HIPS' checkbox is checked, and 'Safe mode' is selected. A red box highlights the option 'Enable embedded code detection and heuristic command-line analysis for', with a red arrow pointing to a modal window titled 'HIPS Command-Line Analysis'. This modal window shows a table of applications with columns for 'APPLICATION', 'HEURISTIC COMMAND-LINE ANALYSIS', and 'EMBEDDED CODE DETECTION'. All applications listed have both columns set to 'ON'.

APPLICATION	HEURISTIC COMMAND-LINE ANALYSIS	EMBEDDED CODE DETECTION
*winlog32.exe	ON	ON

### Windows – Security Level 1 [Former Standard Profile]

- Replaces ‘Windows Standard’ profile.
- Implements the same security settings as mentioned in ‘Windows – Security Level 1’
